

HM\_016

02.11.2009

**To whom it may concern**

**Certificate of Conformity to the requirements according to EN 13648-1:2002  
safety valves for cryogenic service**

On 7<sup>th</sup> and 8<sup>th</sup> of June 1999 an inspection visit was made by the British industrial gas company BOC, during this period HEROSE safety valves for cryogenic service were successfully tested according to the requirements of CEN/TC 268 - Safety Devices for Cryogenic Service (Draft WI 00268039).

This draft was the base used to develop the standard EN 13648-1:2002.

Therefore the requirements of this standard have been fulfilled.

The standard will be revised currently. For a certification by the notified body HEROSE has build up a special test rig to carry out new tests until July 2010 according to the revised standard.
